

🛏️ Google Hotels API

API uptime 100.000%

Our Google Hotels API allows you to scrape hotel and vacation rental results from Google Hotels. The API is accessed through the following endpoint: [/search?engine=google_hotels](#).

A user may query the following: https://serpapi.com/search?engine=google_hotels utilizing a `GET` request. Head to the [playground](#) for a live and interactive demo.

API Parameters

💬 Search Query

q

Required

Parameter defines the search query. You can use anything that you would use in a regular Google Hotels search.

📍 Localization

gl

Optional

Parameter defines the country to use for the Google Hotels search. It's a two-letter country code. (e.g., `us` for the United States, `uk` for United Kingdom, or `fr` for France) Head to the [Google countries page](#) for a full list of supported Google countries.

hl

Optional

Parameter defines the language to use for the Google Hotels search. It's a two-letter language code. (e.g., `en` for English, `es` for Spanish, or `fr` for French). Head to the [Google languages page](#) for a full list of supported Google languages.

currency

Optional

Parameter defines the currency of the returned prices. Default to `USD`. Head to the [Google Travel Currencies page](#) for a full list of supported currency codes.

check_in_date

Required

Parameter defines the check-in date. The format is **YYYY-MM-DD**. e.g. **2025-10-11**

check_out_date

Required

Parameter defines the check-out date. The format is **YYYY-MM-DD**. e.g. **2025-10-12**

adults

Optional

Parameter defines the number of adults. Default to **2**.

children

Optional

Parameter defines the number of children. Default to **0**.

children_ages

Optional

Parameter defines the ages of children. The age range is from **1** to **17**, with children who haven't reached 1 year old being considered as **1**.

Example for single child only:

5

Example for multiple children (separated by comma **,**):

5,8,10

i The number of children's ages specified must match the **children**.

Advanced Filters

sort_by

Optional

Parameter is used for sorting the results. Default is sort by **Relevance**.

Available options:

3 - Lowest price**8** - Highest rating**13** - Most reviewed**min_price**

Optional

Parameter defines the lower bound of price range.

property_types

Optional

Parameter defines to include only certain type of property in the results. Head to the [Google Hotels Property Types page](#) for a full list of supported **Hotels** property types. For Vacation Rentals, please refer to the [Google Vacation Rentals Property Types page](#) for a full list of supported **Vacation Rentals** property types.

Example for single property type only:

[17](#)

Example for multiple property types (seperated by comma ,):

[17,12,18](#)**amenities**

Optional

Parameter defines to include only results that offer specified amenities. Head to the [Google Hotels Amenities page](#) for a full list of supported **Hotels** amenities. For Vacation Rentals, please refer to the [Google Vacation Rentals Amenities page](#) for a full list of supported **Vacation Rentals** amenities.

Example for single amenity only:

[35](#)

Example for multiple amenities (seperated by comma ,):

[35,9,19](#)**rating**

Optional

Parameter is used for filtering the results to certain rating.

Available options:

[7](#) - 3.5+[8](#) - 4.0+[9](#) - 4.5+

Hotels Filters

brands

Optional

Parameter defines the brands where you want your search to be concentrated. ID values are accessible inside **brands** array, located in our JSON output (e.g. `brands[0].id`).

Example for single brand only:

[33](#)

Example for multiple brands (seperated by comma ,):

hotel_class

Optional

Parameter defines to include only certain hotel class in the results.

Available options:

- 2 - 2-star
- 3 - 3-star
- 4 - 4-star
- 5 - 5-star

Example for single hotel class only:

2

Example for multiple hotel class (separated by comma ,):

2,3,4

i This parameter isn't available for Vacation Rentals.

free_cancellation

Optional

Parameter defines to show results that offer free cancellation.

i This parameter isn't available for Vacation Rentals.

special_offers

Optional

Parameter defines to show results that have special offers.

i This parameter isn't available for Vacation Rentals.

eco_certified

Optional

Parameter defines to show results that are eco certified.

i This parameter isn't available for Vacation Rentals.

Vacation Rentals Filters

vacation_rentals

Optional

Parameter defines to search for Vacation Rentals results. Default search is for Hotels.

bedrooms

Optional

bathrooms

Optional

Parameter defines the minimum number of bathrooms. Default to `0`.

 This parameter only available for Vacation Rentals.

Pagination

next_page_token

Optional

Parameter defines the next page token. It is used for retrieving the next page results.

Property Details

property_token

Optional

Parameter is used to get property details which consists of name, address, phone, prices, nearby places, and etc. You can find [property_token](#) from [Google Hotels Properties API](#).

Serpapi Parameters

engine

Required

Set parameter to `google_hotels` to use the Google Hotels API engine.

no_cache

Optional

Parameter will force SerpApi to fetch the Google Hotels results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to `false` (default) to allow results from the cache, or `true` to disallow results from the cache.

`no_cache` and `async` parameters should not be used together.

async

Optional

Parameter defines the way you want to submit your search to SerpApi. It can be set to `false` (default) to open an HTTP connection and keep it open until you got your search results, or `true` to just submit your search to SerpApi and

`zero_trace`

Optional

Enterprise only. Parameter enables [ZeroTrace mode](#). It can be set to `false` (default) or `true`. Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

`api_key`

Required

Parameter defines the SerpApi private key to use.

`output`

Optional

Parameter defines the final output you want. It can be set to `json` (default) to get a structured [JSON](#) of the results, or `html` to get the raw html retrieved.

`json_restricotor`

Optional

Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See [JSON Restrictor](#) for more details.

API Results

JSON Results

JSON output includes structured data for [Properties](#) and [brands](#).

A search status is accessible through `search_metadata.status`. It flows this way: `Processing` -> `Success` || `Error`. If a search has failed, `error` will contain an error message. `search_metadata.id` is the search ID inside SerpApi.

HTML Results

This API does not have html response, just a text.

`search_metadata.pretty_html_file` contains prettified version of result. It is displayed in playground.

JSON structure overview

```
{  
  "brands": [  
    {

Example of showing property details with `q` search

For certain searches with `q`, especially when `q` is the exact name of a hotel, Google Hotels may return the details of the single matching property instead of properties search results.

In such cases, `search_information.hotels_results_state` will have the value `Showing results for property details`.

Also `serpapi_property_details_link` will be present as a canonical way to retrieve the property details using `property_token`.
